JADE Machine Description:

This is a complete line for hot filling of juices with pulp. The line was made in 2007 by various US and UK manufacturers and is in excellent condition. The line is complete from depalletizer and empty bottle inspection to secondary packing and pallet stretch wrapping. The filler includes a sealer which seals the bottle mouth with an aluminum foil before capping. The line is operational until May 2018 and can be seen in operation before that, and it is also available for an earlier sale.
